

DWARVES

RECLAIM YOUR KINGDOM

A CO-OPERATIVE BOARD GAME FOR 1 - 6 PLAYERS!

**PINK
WIZARD**

Overview

Dwarves: Reclaim your Kingdom is a cooperative board game for 1-6 players. You will assume the role of a Dwarven Noble who leads a small group of workers and warriors to reclaim your lost kingdom and defeat the enemies who seek to claim it as their own!

Throughout the game you'll travel around the city, search ruins to discover long lost buildings, train new and advanced workers and root out the enemy who lurks within your city!

Pink Wizard

Pink Wizard is a solo and independent Australian board and card game business run by Ben Galea. I aim to create games that I love and feel are unique. I love exploring themes that pique my interest, aren't really explored that much and have a unique fandom. This is my first game and I thank you for your support! You can keep up to date with all my future games at:

- And many more!

Components

28 x Map Tiles:

- 5x Tunnels
- 1x Hearth
- 2x Living Quarters (1 Starter)
- 2x Barracks (1 Starter)
- 3x Mine (1 Starter)
- 2x Aviary
- 2x Watchtower
- 4x Empty Halls
- 3x Encampments
- 2x Blacksmith
- 1x Throne Room
- 1x City Gate

Enemy Movement Tile and Dice (d4)

6x Title Cards

- Master Smith
- Expert Miner
- Workmaster
- Master of the Guard
- Regent
- Messenger

6x Player Noble Meeples

60x Dice: 18d4, 24d6, 18d8

60x Resource Tokens

1x Round Tracker and Marker

20x Warrior Tokens

40x Enemy Tokens

1x Rulebook

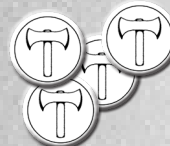

Title Cards

Map Tiles

Enemy Tokens

Warrior Tokens

Turn Tracker

Enemy Movement Tile

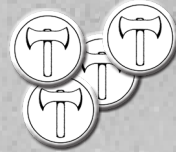

Resource Tokens

Game Setup

1. Set aside the following tiles (None of these tiles have 'Ruins' on the back, they will have the game logo or their respective back)
 - Hearth
 - Mine
 - City Gate
 - Living Quarters
 - Barracks
 - Tunnels
2. Gather the remaining tiles with the 'Ruins' side face up. Shuffle these and place them in a stack
3. Build a 5×5 grid as shown on the following page
4. Each player chooses a colour and collects their coloured dice and places their associated Dwarven Noble Meeple on the Hearth
5. You start the game with 2d4, 1d6 and 1d8 as your 'active workers'. Place the remaining dice to the side to be recruited later. If you're playing with 1 or 2 players, start the game with an additional d6
6. Count out 10 resources per player and add them to the supply. Place the remaining resource tokens back in the box. Each player starts the game with 3 resources. If you are playing with 1 player, count out 20 resources and start the game with 5
7. Place the six title cards to the side where all players can see them.
8. Place the enemy movement tile where all players can see it and place the enemy movement die on top of it.
9. Place the turn track tile near the board and place the black meeple on the appropriate starting place based on the number of players.

Example of Game Setup

Winning and Losing

You win the game when you close the City Gate! To close the City Gate, you must first:

- Explore all ruin tiles
- All tunnels must be collapsed

There are 3 ways you can lose the game. If you:

- Reach the end of the turn track
- Enemies would create a tunnel and there are already 5
- Enemies create a tunnel on the Hearth

Game Turns

Dwarves: Reclaim your Kingdom is played over a series of turns. Each turn contains the 'Dwarf phase' and the 'Enemy Phase'.

Dwarf Phase

Revive: Return all wounded Dwarf Nobles (who have missed a turn) to the Hearth.

Roll: Roll your available worker dice

Act: Players simultaneously resolve their worker dice by using the actions listed on their current and/or adjacent tiles (not diagonal). You can move 1 space to an adjacent tile (not diagonal) at any point

during your turn. You may also pick up and drop off Warrior Tokens while you move around the map.

Enemy Phase

Tunnels: Enemies destroy tiles and create tunnels (see "Enemy Tunnels" on page 7 for more information)

Move: Enemies move. Roll the enemy die (d4) and move all enemies on the map in that direction shown on the enemy movement tile. If any enemies are at the edge of the map and can't move in the direction rolled, they move in the opposite direction instead.

Spawn: Spawn enemies based on the turn track to all tiles with 'Spawn Points'. Collect a number of Enemy Tokens based on the number on the turn track and place them on 'Spawn Points' around the map.

Track: Move the turn marker down one space on the turn track. When you reach the end of the turn track, flip it over to the second side. Once you reach the end on this side, you lose.

Additional Rules

Movement

When moving around the map, you can usually only move 1 tile per turn. This movement can only be up, down, left and right, not diagonal. Some effects, like starting your turn on the Hearth, will grant you +1 movement, meaning you can move 2 spaces for that turn.

Actions

Most buildings and some titles have actions. On your turn, you can use actions listed on buildings. To do so, spend an unused dice with a value equal to or greater than the number in the brackets after the action name. Then perform the action.

Resources

There are 10 resources per player in the supply. Each player can hold any number of resources, however when the supply runs out, players can't gain resources anymore, they must be spent before they can be gained again.

Worker Assistance

When using an action, you can combine up to 2 worker dice, adding their values together to achieve a larger result. You can not combine any more than 2 dice for any one action (unless otherwise stated).

Warriors

When moving around the map, you can take a number of Warrior Tokens with you. The number of tokens you can move is limited by the number of players in the game.

Number of Players	Warriors
1	5
2 - 3	4
4 - 5	3
6	2

Blocked Tiles

If a tile has an Enemy Token on it, then it is considered to be blocked. Players are unable to use the actions listed on that tile or benefit from any passive ability of that tile. Enemies must be moved or removed before players can use the tile for its actions again.

Combat

If at any point during the game an Enemy Token shares the same space with a Warrior Token, they fight one another and are both discarded. If a Dwarf Noble Meeple ever shares a location with an Enemy Token and there are no warriors to fight for them, they are Wounded (See 'Wounded')

Dwarf Noble Combat

Any player can attack an Enemy Token on their own or an adjacent tile by using a single worker die that rolls a value of 6+. The 'Worker Assistance' rule cannot be used to gain the 6+. This die can be spent to remove an Enemy Token before the token would wound you. (See "Wounded" below)

Wounded

If your Dwarf Noble takes damage because an Enemy Token shares your space (and you were unable to remove them with 'Noble Combat'), remove your Dwarf Noble from the board and progress the turn marker on the track by 1. You are now Wounded.

You will miss the next Dwarf Phase and are returned to the Hearth at the beginning of the following Dwarf Phase.

If the Hearth has Enemy Tokens on it when you go to put your Dwarf Noble there, you are unable to join the battle and must wait until there are no Enemy Tokens on the Hearth at the start of a turn.

Expedition Action

Most locations in the game are 'Ruins'. Ruins have a darker face and must be explored to see what building is on the

other side. All ruins need to be flipped in order to win the game.

Performing the 'Expedition' action can be a dangerous endeavour. When you flip a Ruin tile, roll the enemy die (d4) and spawn that many Enemy Tokens on that building.

Enemy Surge

There are a maximum of 40 Enemy Tokens in the game. If you need to spawn an enemy and there are none to spawn, then all enemies on the map move **immediately**. Roll the enemy die (d4) and move all enemies on the map!

In some rare occasions, an Enemy Surge can occur in the Dwarf Phase. If it does, no players can take actions or move when it triggers. You must resolve the Enemy Surge then continue play.

Remember if an enemy ever shares a location with a warrior or a player, they are attacked, even if it's not your turn! Beware the Enemy Surge!

Enemy Tunnels

At the start of the Enemy Phase, if there are ever 6 or more enemies on a single tile, the tile is destroyed and replaced with a tunnel. Buildings that are destroyed and turned into tunnels are permanently lost!

Tunnels are Spawn Points where additional enemies will spawn each turn, based on the round number. When you take the 'Collapse Tunnel' action, you can flip the tunnel over, collapsing it and disabling the Spawn Point. Remember, enemies block the use of actions on tiles, this includes the 'Collapse Tunnel' action.

There can be a maximum of 5 tunnels on the map, whether they are collapsed or open. If you ever go to create the 6th tunnel, you lose the game.

Enemies are unable to destroy specific tiles. These include: The City Gate, other tunnels and Ruins.

Bending the Rules *(Optional)*

Dwarves: Reclaim Your Kingdom is balanced for 4-6 players and, due to the random nature of dice rolling and placing map tiles, can be quite difficult when playing solo or with 2 players.

The game should be difficult at times and you might not win every game you play, but that's what we believe makes cooperative games fun!

In saying that, if you are playing with a low number of players and struggling to win and have fun, you can change some rules around which make the game more

forgiving. Here are some things we suggest!

- Try starting the game with more dice
- Place a Blacksmith close to the starting tiles, maybe even start with it revealed
- Remove the restriction to only have 1 title at any time
- When a dwarf is wounded, don't progress the round marker

Alternatively, if you are finding the game too easy and are winning more often than not or are looking for more of a challenge, try some of these:

- Start the game with no d8 in your active dice pool
- Apply a -1 penalty to all dice results
- Create the resource pool as if there was 1 less player
- Reduce the number of Warrior tokens available
- Start the game further down the turn track

Ultimately, we want you to have fun when playing the game! If some of these changes are more entertaining for you, make the changes and enjoy!

Good Luck and Have Fun!

Tile Explanations

Aviary

Using the 'Reinforcements' action is a resource efficient way to get warriors, however it relies on you rolling well on 2 dice to use it.

Barracks

Warriors you train from the barracks are added to your location, not the barracks itself.

Blacksmith

This is your way to upgrade your dice to better dice. When you use the 'Promote Worker' action, the dice you upgrade is removed from your active pool, so better to upgrade a dice which you have already activated this turn. The dice you upgraded from is returned back to your pool of unavailable dice until recruited again.

Empty Halls

When you move onto this tile, you can't move off it again without first taking the 'Discover the path' action. This action must be taken in the same turn as your movement off the tile.

Encampment

When you discover this tile, do not roll the enemy dice, simply add 6 Enemy

Tokens here. Remember, this might trigger an Enemy Surge. When using the 'False Commands' action, you can choose to move any Enemy Token on the map 2 spaces. You could run them into warriors to remove them, or off tiles so that you can now use them.

Hearth

Starting your turn here is a nice way to gain access to further reaches of the city as it grants you +1 movement for the turn. If you have the option to end your turn here, it is usually a good move to do so.

Living Quarters

This is a way to recruit your non-active d4 workers. You are limited by the number you have in your pool, however as you upgrade d4s into d6s, they can be re-recruited at the Living Quarters.

Mine

Gains resources based on the dice you put into the mine. Dice values of 1, 2 and 3 gain 1 resource, while any dice above 4 gains 3 resources. If you have the option to combine 2 dice with the values of 2, you gain 3 resources as opposed to 1 twice.

Ruins

Enemies won't break Ruins to form tunnels, additionally when you flip a Ruin

you need to roll the enemy dice and add enemies here. The building won't be immediately accessible until those enemies are removed. When all 40 Enemy Tokens are on the map, exploring is dangerous because it WILL result in an Enemy Surge.

Throne Room

No real use past gaining the 'Regent' title.

Watchtower

You can't be wounded here. This can be powerful, however remember it's possible to get trapped if you are surrounded by enemies

Titles Explanations

You're limited to one title per player. If you were to gain a second title, return the first one to the available titles. If another player has this tile, you can claim it only if they are willing to give it up.

When playing with only 1 player, you can have up to 2 titles at any time.

Master Miner

Any dice you place in the mine will always get you 3 resources, because a 1 becomes a 4. For your 'Minecart Network' ability, if you are standing on a Mine, treat your Dwarf Noble Meeple as also being on any

other mine at the same time.

Regent

This gives you the largest dice in the game, the d12. Your Bodyguard action allows any roll of 7+ to remove 2 Enemy Tokens.

Master Smith

Promoting dice is very easy for you, as any dice can be used for the 'Promote Worker' action. Your 'Architect' action means you can swap 2 adjacent tiles on the map. This can result in you moving tunnels, moving watchtowers to more advantageous positions, or making sure a mine is always in the right spot! Remember, any tokens or Dwarf Noble Meeples will not move with the swapped tiles.

Workmaster

Gains access to the d10, a powerful dice. With the ability to now combine 3 dice together, they are able to achieve much higher results easier than other players.

Messenger

This is the best way to move around the board and explore ruins. Expeditions will no longer cost resources, and will only ever spawn the lowest number of enemies. It also grants a permanent +1 movement bonus.

Quick Reference

Winning the game

You win the game when you close the city gate. You must explore all ruin tiles and all tunnels must be collapsed.

Losing the game

There are 3 ways you can lose the game. If you reach the end of the turn track, you attempt to place a 6th tunnel or enemies create a tunnel on the Hearth.

Dwarf Phase:

- Return all Wounded Dwarf Noble Meeples (who have missed a turn) to the Hearth
- Roll your available worker dice
- Simultaneously resolve your worker dice by using the actions. You can also move one space to an adjacent tile, breaking up movement and actions

Enemy Phase:

- Enemies destroy tiles and create tunnels
- Enemies move
- Spawn enemies based on the turn track to all spawn points
- Move the turn marker down one space on the turn track

Remeber!

- Whenever a warrior and enemy share a space, they fight and are both discarded
- You can't combine more than 2 dice together to use an action
- If an Enemy Token is on a tile, it blocks you from using the actions there
- If you have no enemies to spawn, resolve an Enemy Surge
- Don't let too many enemies gather near your hearth, losing it will lose you the game
